THE APPLICATION OF THE ROTATING DISK ELECTRODE TO THE STUDY OF KINETIC AND CATALYTIC PROCESSES IN ELECTROCHEMISTRY. [1960]
21p. 8 refs.

Order from LC or SLA ml\$2.70, ph\$4.80 60-18784

Trans. of *Zhurnal Fizicheskoy Khimii (USSR) 1958, v. 32, no. 7, p. 1565-1575.

The disk electrode has more merits than the dropping mercury electrode as an instrument for studying electrode reactions complicated by volume reactions. The limiting diffusion currents on the surface of a disk electrode have been calculated for typical cases of kinetic and catalytic processes. On these examples a general procedure has been demonstrated for calculating such reactions. (Author)
